# Campus Lost & Found Portal

## Find What Matters, Faster!

Using Django Framework

django

## Introduction

The Campus Lost & Found Portal is a web application built using Django framework. It helps students and staff report lost or found items on campus and makes it easy to search and get them back.

## Objective

To provide a simple and efficient platform for students to report, search and recover lost items on campus.

## Key Features

**Report Lost / Found Items**
Add details with photos and location.

**Search Items**
Find items by name, category or location.

**User Accounts**
Students and staff can register and manage their posts.

**Secure & Reliable**
Your data is safe with Django's built-in security.

## Technology Used

| Python | Django | HTML | CSS | SQLite / MySQL |
|---|---|---|---|---|
| (Programming Language) | (Web Framework) | (Structure) | (Styling) | (Database) |

## Why Django?

- **Fast Development** — Get started quickly and build with less code.
- **Secure** — Protects from common web attacks.
- **Easy to Manage** — Simple and clean code structure.
- **Great for Web Apps** — Perfect for campus portals and more!

## Conclusion

The Campus Lost & Found Portal using Django is a simple, secure and effective solution to help students find their lost belongings and keep the campus community connected.

Because every item has a story...

Lost → Report → Found

A Smarter Campus ♥ With Django
